

CAMBRIA PRODUCT CARE & MAINTENANCE INFORMATION

Maintaining Cambria Products is easy. Simply wash with a soft cotton cloth and warm water; use mild soap if desired.

Do not expose Cambria Product in use or otherwise to abrasive, strong alkaline, acid, free radicals, oxidizers, or cleaners (whether high, neutral, or low pH). Various chemicals, including Cambria products, are corrosive and erosive in their ability to attack any surface. Be very aware of these potential damages to its surface.

Cambria is not heat-proof, chemical-proof, or fracture-proof in any form. Therefore, please keep in mind damaging exposure to these potentially damaging acts.

Do not use or expose Cambria Product to certain cleaning products, including, but not limited to, bleach, oven cleaners, Comet®, Soft Scrub®, S.O.S.® pads, products with pumice, batteries, paint removers, furniture strippers, tarnish or silver cleaners, or the like. Do not use abrasive or harsh scrub pads. Do not apply sealers, penetrants, or topical treatments to Cambria products under any circumstances. Such products will wear off and cause the gloss to appear dull or inconsistent. Contact Cambria for further information by calling 1-866-CAMBRIA (1-866-226-2742) or visiting our website at CambriaUSA.com.

Cambria Product is created from pure natural quartz stone. Therefore, variations in natural quartz stone colour, pattern, size, shape, and shade are unique and inherent characteristics of this product. Colour blotches are intentionally included in many designs to enhance the product's natural beauty. Samples are small select cuts from a larger slab and may not fully exhibit all the design characteristics of the final installed product. These variations do not affect performance and do not qualify for product replacement.

Cambria is durable and resistant to surface damage. However, all stones can be damaged by force, and no stone is chip-proof. Objects hitting edges, particularly at sinks or dishwashers, may cause chips. Though a minor knife slip will dull the knife and not harm Cambria Product, no stone surface is scratch-proof. Surface markings are more visible on monotone designs than on multicoloured design surfaces.

Cambria Product is not a seamless product; seams are visible. Where there are seams, changes in the product pattern and shade will be visible.

Natural stone surfaces can be damaged by sudden and rapid changes in temperature, especially near the edges, as well as direct and sustained heating of the top. Cambria products may not withstand the direct transfer of heat from pots and pans and other cooking units such as electric frying pans and griddles, slow cookers, roaster ovens, and heat lamps. Therefore, like a breadboard, a closed-weave hot pad or solid trivet is always recommended to prevent heating the product. Cambria Product is not a structural material and must be supported in every application. 2cm and 3cm thicknesses are for countertops and other horizontal surfaces; 1cm thickness is for vertical surface finishes such as walls and full-height backsplash.

Cambria Matte® finish will show surface markings caused during everyday use, which are easily removed by simply washing with a soft cotton cloth and warm water; use a mild soap if desired. Cambria Matte® finish does not shine and may soil and appear to stain from soiling, mainly when used in heavy traffic areas such as flooring.

The veining in Berkshire Brass™ designs may present a slight patina.

Installation of Cambria Product requires walls and cabinets to be adequately prepared for installation, including but not limited to structurally sound, straight, level, and square walls and cabinets. Lack of proper preparation may cause poor installation and seam fit or inconsistent countertop overhang and placement.

Thank you for purchasing Cambria at The Worktop Library.
